

## Cyrillic fonts to match Latin Modern

Latin Modern does not work for the Cyrillic script. If the CM-Super package is installed, it will be used instead. If not, bitmapped LM fonts are used for cyrillic text. The *cmlgc* package provides free Cyrillic vector-fonts matching CM.

### 1 Заголовок

первый пример: „Здравствуй, мир!“  
"Здравствуй, мир!"

### 2 section title in latin script

Babel does not switch the font encoding when changing between Russian and English. As a standard font encoding, T2A provides basic Latin. However, the TeX Gyre fonts provide better support for accented Latin letters (compare the result of drag-and-drop of the following lines from the PDF rendering).

T2A „Viele Grüße!“ "Hello world!"  
T1 „Viele Grüße!“ "Hello world!"
