Table of Contents

Chapter 1. Introduction

This document describes the interfaces available for device drivers that drive s390 based channel attached I/O devices. This includes interfaces for interaction with the hardware and interfaces for interacting with the common driver core. Those interfaces are provided by the s390 common I/O layer.

The document assumes a familarity with the technical terms associated with the s390 channel I/O architecture. For a description of this architecture, please refer to the "z/Architecture: Principles of Operation", IBM publication no. SA22-7832.

While most I/O devices on a s390 system are typically driven through the channel I/O mechanism described here, there are various other methods (like the diag interface). These are out of the scope of this document.

Some additional information can also be found in the kernel source under Documentation/s390/driver-model.txt.

Chapter 2. The ccw bus

The ccw bus typically contains the majority of devices available to a s390 system. Named after the channel command word (ccw), the basic command structure used to address its devices, the ccw bus contains so-called channel attached devices. They are addressed via I/O subchannels, visible on the css bus. A device driver for channel-attached devices, however, will never interact with the subchannel directly, but only via the I/O device on the ccw bus, the ccw device.

I/O functions for channel-attached devices

Some hardware structures have been translated into C structures for use by the common I/O layer and device drivers. For more information on the hardware structures represented here, please consult the Principles of Operation.

Name

struct ccw1 — channel command word

Synopsis

```
struct ccw1 {
  __u8 cmd_code;
  __u8 flags;
  __u16 count;
  __u32 cda;
};
```

Members

cmd_code   command code

flags   flags, like IDA addressing, etc.

count   byte count

cda   data address

Description

The ccw is the basic structure to build channel programs that perform operations with the device or the control unit. Only Format-1 channel command words are supported.

Name

struct erw — extended report word

Synopsis

```
struct erw {
  __u32 res0:3;
  __u32 auth:1;
  __u32 pvrf:1;
  __u32 cpt:1;
  __u32 fsavf:1;
  __u32 cons:1;
  __u32 scavf:1;
  __u32 fsaf:1;
  __u32 scnt:6;
  __u32 res16:16;
};
```

Members

res0   reserved

auth   authorization check

pvrf   path-verification-required flag

cpt   channel-path timeout

fsavf   failing storage address validity flag

cons   concurrent sense

scavf   secondary ccw address validity flag

fsaf   failing storage address format

scnt   sense count, if $cons == 1$

res16   reserved

Name

struct erw_eadm — EADM Subchannel extended report word

Synopsis

```
struct erw_eadm {
  __u32 b:1;
  __u32 r:1;
};
```

Members

b   aob error

r   arsb error

Name

struct sublog — subchannel logout area

Synopsis

```
struct sublog {
  __u32 res0:1;
  __u32 esf:7;
  __u32 lpum:8;
  __u32 arep:1;
  __u32 fvf:5;
  __u32 sacc:2;
  __u32 termc:2;
  __u32 devsc:1;
  __u32 serr:1;
  __u32 ioerr:1;
  __u32 seqc:3;
};
```

Members

res0   reserved

esf   extended status flags

lpum   last path used mask

arep   ancillary report

fvf   field-validity flags

sacc   storage access code

termc   termination code

devsc   device-status check

serr   secondary error

ioerr   i/o-error alert

seqc   sequence code

Name

struct esw0 — Format 0 Extended Status Word (ESW)

Synopsis

```
struct esw0 {
  struct sublog sublog;
  struct erw erw;
  __u32 faddr[2];
  __u32 saddr;
};
```

Members

sublog   subchannel logout

erw   extended report word

faddr[2]   failing storage address

saddr   secondary ccw address

Name

struct esw1 — Format 1 Extended Status Word (ESW)

Synopsis

```
struct esw1 {
  __u8 zero0;
  __u8 lpum;
  __u16 zero16;
  struct erw erw;
  __u32 zeros[3];
};
```

Members

zero0 reserved zeros

lpum last path used mask

zero16 reserved zeros

erw extended report word

zeros[3] three fullwords of zeros

Name

struct esw2 — Format 2 Extended Status Word (ESW)

Synopsis

```
struct esw2 {
  __u8 zero0;
  __u8 lpum;
  __u16 dcti;
  struct erw erw;
  __u32 zeros[3];
};
```

Members

zero0 reserved zeros

lpum last path used mask

dcti device-connect-time interval

erw extended report word

zeros[3] three fullwords of zeros

Name

struct esw3 — Format 3 Extended Status Word (ESW)

Synopsis

```
struct esw3 {
  __u8 zero0;
  __u8 lpum;
  __u16 res;
  struct erw erw;
  __u32 zeros[3];
};
```

Members

zero0   reserved zeros

lpum   last path used mask

res   reserved

erw   extended report word

zeros[3]   three fullwords of zeros

Name

struct esw_eadm — EADM Subchannel Extended Status Word (ESW)

Synopsis

```
struct esw_eadm {
  __u32 sublog;
  struct erw_eadm erw;
};
```

Members

sublog   subchannel logout

erw   extended report word

Name

struct irb — interruption response block

Synopsis

```
struct irb {
  union scsw scsw;
  union esw;
  __u8 ecw[32];
};
```

Members

scsw   subchannel status word

esw   extended status word

ecw[32]   extended control word

Description

The irb that is handed to the device driver when an interrupt occurs. For solicited interrupts, the common I/O layer already performs checks whether a field is valid; a field not being valid is always passed as 0. If a unit check occurred, *ecw* may contain sense data; this is retrieved by the common I/O layer itself if the device doesn't support concurrent sense (so that the device driver never needs to perform basic sene itself). For unsolicited interrupts, the irb is passed as-is (expect for sense data, if applicable).

Name

struct ciw — command information word (CIW) layout

Synopsis

```
struct ciw {
  __u32 et:2;
  __u32 reserved:2;
  __u32 ct:4;
  __u32 cmd:8;
  __u32 count:16;
};
```

Members

et   entry type

reserved   reserved bits

ct   command type

cmd   command code

count   command count

Name

struct ccw_dev_id — unique identifier for ccw devices

Synopsis

```
struct ccw_dev_id {
  u8 ssid;
  u16 devno;
};
```

Members

ssid   subchannel set id

devno   device number

Description

This structure is not directly based on any hardware structure. The hardware identifies a device by its device number and its subchannel, which is in turn identified by its id. In order to get a unique identifier for ccw devices across subchannel sets, $struct$ ccw_dev_id has been introduced.

Name

ccw_dev_id_is_equal — compare two ccw_dev_ids

Synopsis

```
int ccw_dev_id_is_equal (struct ccw_dev_id * dev_id1, struct ccw_dev_id
* dev_id2);
```

Arguments

dev_id1 a ccw_dev_id

dev_id2 another ccw_dev_id

Returns

1 if the two structures are equal field-by-field, 0 if not.

Context

any

Name

pathmask_to_pos — find the position of the left-most bit in a pathmask

Synopsis

u8 **pathmask_to_pos** (u8 *mask*);

Arguments

mask   pathmask with at least one bit set

ccw devices

Devices that want to initiate channel I/O need to attach to the ccw bus. Interaction with the driver core is done via the common I/O layer, which provides the abstractions of ccw devices and ccw device drivers.

The functions that initiate or terminate channel I/O all act upon a ccw device structure. Device drivers must not bypass those functions or strange side effects may happen.

Name

struct ccw_device — channel attached device

Synopsis

```
struct ccw_device {
  spinlock_t * ccwlock;
  struct ccw_device_id id;
  struct ccw_driver * drv;
  struct device dev;
  int online;
  void (* handler) (struct ccw_device *, unsigned long, struct irb *);
};
```

Members

ccwlock   pointer to device lock

id   id of this device

drv   ccw driver for this device

dev   embedded device structure

online   online status of device

handler   interrupt handler

Description

handler is a member of the device rather than the driver since a driver can have different interrupt handlers for different ccw devices (multi-subchannel drivers).

Name

struct ccw_driver — device driver for channel attached devices

Synopsis

```
struct ccw_driver {
  struct ccw_device_id * ids;
  int (* probe) (struct ccw_device *);
  void (* remove) (struct ccw_device *);
  int (* set_online) (struct ccw_device *);
  int (* set_offline) (struct ccw_device *);
  int (* notify) (struct ccw_device *, int);
  void (* path_event) (struct ccw_device *, int *);
  void (* shutdown) (struct ccw_device *);
  int (* prepare) (struct ccw_device *);
  void (* complete) (struct ccw_device *);
  int (* freeze) (struct ccw_device *);
  int (* thaw) (struct ccw_device *);
  int (* restore) (struct ccw_device *);
  enum uc_todo (* uc_handler) (struct ccw_device *, struct irb *);
  struct device_driver driver;
  enum interruption_class int_class;
};
```

Members

ids	ids supported by this driver
probe	function called on probe
remove	function called on remove
set_online	called when setting device online
set_offline	called when setting device offline
notify	notify driver of device state changes
path_event	notify driver of channel path events
shutdown	called at device shutdown
prepare	prepare for pm state transition
complete	undo work done in *prepare*
freeze	callback for freezing during hibernation snapshotting
thaw	undo work done in *freeze*
restore	callback for restoring after hibernation
uc_handler	callback for unit check handler
driver	embedded device driver structure

int_class   interruption class to use for accounting interrupts

Name

ccw_device_set_offline — disable a ccw device for I/O

Synopsis

```
int ccw_device_set_offline (struct ccw_device * cdev);
```

Arguments

cdev   target ccw device

Description

This function calls the driver's `set_offline` function for *cdev*, if given, and then disables *cdev*.

Returns

`0` on success and a negative error value on failure.

Context

enabled, ccw device lock not held

Name

ccw_device_set_online — enable a ccw device for I/O

Synopsis

```
int ccw_device_set_online (struct ccw_device * cdev);
```

Arguments

cdev   target ccw device

Description

This function first enables *cdev* and then calls the driver's `set_online` function for *cdev*, if given. If `set_online` returns an error, *cdev* is disabled again.

Returns

0 on success and a negative error value on failure.

Context

enabled, ccw device lock not held

Name

get_ccwdev_by_dev_id — obtain device from a ccw device id

Synopsis

```
struct ccw_device * get_ccwdev_by_dev_id (struct ccw_dev_id * dev_id);
```

Arguments

dev_id   id of the device to be searched

Description

This function searches all devices attached to the ccw bus for a device matching *dev_id*.

Returns

If a device is found its reference count is increased and returned; else `NULL` is returned.

Name

get_ccwdev_by_busid — obtain device from a bus id

Synopsis

```
struct ccw_device * get_ccwdev_by_busid (struct ccw_driver * cdrv, const
char * bus_id);
```

Arguments

cdrv   driver the device is owned by

bus_id   bus id of the device to be searched

Description

This function searches all devices owned by *cdrv* for a device with a bus id matching *bus_id*.

Returns

If a match is found, its reference count of the found device is increased and it is returned; else NULL is returned.

Name

ccw_driver_register — register a ccw driver

Synopsis

```
int ccw_driver_register (struct ccw_driver * cdriver);
```

Arguments

cdriver   driver to be registered

Description

This function is mainly a wrapper around `driver_register`.

Returns

`0` on success and a negative error value on failure.

Name

ccw_driver_unregister — deregister a ccw driver

Synopsis

void **ccw_driver_unregister** (struct ccw_driver * *cdriver*);

Arguments

cdriver   driver to be deregistered

Description

This function is mainly a wrapper around `driver_unregister`.

Name

ccw_device_siosl — initiate logging

Synopsis

```
int ccw_device_siosl (struct ccw_device * cdev);
```

Arguments

cdev   ccw device

Description

This function is used to invoke model-dependent logging within the channel subsystem.

Name

ccw_device_set_options_mask — set some options and unset the rest

Synopsis

int **ccw_device_set_options_mask** (struct ccw_device * *cdev*, unsigned long *flags*);

Arguments

cdev   device for which the options are to be set

flags   options to be set

Description

All flags specified in *flags* are set, all flags not specified in *flags* are cleared.

Returns

0 on success, -EINVAL on an invalid flag combination.

Name

ccw_device_set_options — set some options

Synopsis

```
int ccw_device_set_options (struct ccw_device * cdev, unsigned long
flags);
```

Arguments

cdev   device for which the options are to be set

flags   options to be set

Description

All flags specified in *flags* are set, the remainder is left untouched.

Returns

0 on success, -EINVAL if an invalid flag combination would ensue.

Name

ccw_device_clear_options — clear some options

Synopsis

```
void ccw_device_clear_options (struct ccw_device * cdev, unsigned long
flags);
```

Arguments

cdev   device for which the options are to be cleared

flags options to be cleared

Description

All flags specified in *flags* are cleared, the remainder is left untouched.

Name

ccw_device_is_pathgroup — determine if paths to this device are grouped

Synopsis

```
int ccw_device_is_pathgroup (struct ccw_device * cdev);
```

Arguments

cdev   ccw device

Description

Return non-zero if there is a path group, zero otherwise.

Name

ccw_device_is_multipath — determine if device is operating in multipath mode

Synopsis

```
int ccw_device_is_multipath (struct ccw_device * cdev);
```

Arguments

cdev   ccw device

Description

Return non-zero if device is operating in multipath mode, zero otherwise.

Name

ccw_device_clear — terminate I/O request processing

Synopsis

int **ccw_device_clear** (struct ccw_device * *cdev*, unsigned long *intparm*);

Arguments

cdev   target ccw device

intparm   interruption parameter; value is only used if no I/O is outstanding, otherwise the intparm associated with the I/O request is returned

Description

ccw_device_clear calls csch on *cdev*'s subchannel.

Returns

0 on success, -ENODEV on device not operational, -EINVAL on invalid device state.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_start_key — start a s390 channel program with key

Synopsis

```
int ccw_device_start_key (struct ccw_device * cdev, struct ccw1 * cpa,
unsigned long intparm, __u8 lpm, __u8 key, unsigned long flags);
```

Arguments

cdev   target ccw device

cpa   logical start address of channel program

intparm   user specific interruption parameter; will be presented back to *cdev*'s interrupt handler. Allows a device driver to associate the interrupt with a particular I/O request.

lpm   defines the channel path to be used for a specific I/O request. A value of 0 will make cio use the opm.

key   storage key to be used for the I/O

flags   additional flags; defines the action to be performed for I/O processing.

Description

Start a S/390 channel program. When the interrupt arrives, the IRQ handler is called, either immediately, delayed (dev-end missing, or sense required) or never (no IRQ handler registered).

Returns

0, if the operation was successful; -EBUSY, if the device is busy, or status pending; -EACCES, if no path specified in *lpm* is operational; -ENODEV, if the device is not operational.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_start_timeout_key — start a s390 channel program with timeout and key

Synopsis

```
int ccw_device_start_timeout_key (struct ccw_device * cdev, struct ccw1
* cpa, unsigned long intparm, __u8 lpm, __u8 key, unsigned long flags,
int expires);
```

Arguments

cdev   target ccw device

cpa   logical start address of channel program

intparm   user specific interruption parameter; will be presented back to *cdev*'s interrupt handler. Allows a device driver to associate the interrupt with a particular I/O request.

lpm   defines the channel path to be used for a specific I/O request. A value of 0 will make cio use the opm.

key   storage key to be used for the I/O

flags   additional flags; defines the action to be performed for I/O processing.

expires   timeout value in jiffies

Description

Start a S/390 channel program. When the interrupt arrives, the IRQ handler is called, either immediately, delayed (dev-end missing, or sense required) or never (no IRQ handler registered). This function notifies the device driver if the channel program has not completed during the time specified by *expires*. If a timeout occurs, the channel program is terminated via xsch, hsch or csch, and the device's interrupt handler will be called with an irb containing ERR_PTR(-ETIMEDOUT).

Returns

0, if the operation was successful; -EBUSY, if the device is busy, or status pending; -EACCES, if no path specified in *lpm* is operational; -ENODEV, if the device is not operational.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_start — start a s390 channel program

Synopsis

```
int ccw_device_start (struct ccw_device * cdev, struct ccw1 * cpa,
unsigned long intparm, __u8 lpm, unsigned long flags);
```

Arguments

cdev   target ccw device

cpa   logical start address of channel program

intparm   user specific interruption parameter; will be presented back to *cdev*'s interrupt handler. Allows a device driver to associate the interrupt with a particular I/O request.

lpm   defines the channel path to be used for a specific I/O request. A value of 0 will make cio use the opm.

flags   additional flags; defines the action to be performed for I/O processing.

Description

Start a S/390 channel program. When the interrupt arrives, the IRQ handler is called, either immediately, delayed (dev-end missing, or sense required) or never (no IRQ handler registered).

Returns

0, if the operation was successful; -EBUSY, if the device is busy, or status pending; -EACCES, if no path specified in *lpm* is operational; -ENODEV, if the device is not operational.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_start_timeout — start a s390 channel program with timeout

Synopsis

```
int ccw_device_start_timeout (struct ccw_device * cdev, struct ccw1 *
cpa, unsigned long intparm, __u8 lpm, unsigned long flags, int expires);
```

Arguments

cdev   target ccw device

cpa   logical start address of channel program

intparm   user specific interruption parameter; will be presented back to cdev's interrupt handler.
           Allows a device driver to associate the interrupt with a particular I/O request.

lpm   defines the channel path to be used for a specific I/O request. A value of 0 will make cio
           use the opm.

flags   additional flags; defines the action to be performed for I/O processing.

expires   timeout value in jiffies

Description

Start a S/390 channel program. When the interrupt arrives, the IRQ handler is called, either immediately,
delayed (dev-end missing, or sense required) or never (no IRQ handler registered). This function notifies
the device driver if the channel program has not completed during the time specified by expires. If a
timeout occurs, the channel program is terminated via xsch, hsch or csch, and the device's interrupt handler
will be called with an irb containing ERR_PTR(-ETIMEDOUT).

Returns

0, if the operation was successful; -EBUSY, if the device is busy, or status pending; -EACCES, if no path
specified in lpm is operational; -ENODEV, if the device is not operational.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_halt — halt I/O request processing

Synopsis

```
int ccw_device_halt (struct ccw_device * cdev, unsigned long intparm);
```

Arguments

cdev   target ccw device

intparm   interruption parameter; value is only used if no I/O is outstanding, otherwise the intparm
associated with the I/O request is returned

Description

`ccw_device_halt` calls hsch on *cdev*'s subchannel.

Returns

0 on success, -`ENODEV` on device not operational, -`EINVAL` on invalid device state, -`EBUSY` on device
busy or interrupt pending.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_resume — resume channel program execution

Synopsis

int **ccw_device_resume** (struct ccw_device * *cdev*);

Arguments

cdev   target ccw device

Description

ccw_device_resume calls rsch on *cdev*'s subchannel.

Returns

0 on success, -ENODEV on device not operational, -EINVAL on invalid device state, -EBUSY on device busy or interrupt pending.

Context

Interrupts disabled, ccw device lock held

Name

ccw_device_get_ciw — Search for CIW command in extended sense data.

Synopsis

```
struct ciw * ccw_device_get_ciw (struct ccw_device * cdev, __u32 ct);
```

Arguments

cdev   ccw device to inspect

ct   command type to look for

Description

During SenseID, command information words (CIWs) describing special commands available to the device may have been stored in the extended sense data. This function searches for CIWs of a specified command type in the extended sense data.

Returns

NULL if no extended sense data has been stored or if no CIW of the specified command type could be found, else a pointer to the CIW of the specified command type.

Name

ccw_device_get_path_mask — get currently available paths

Synopsis

__u8 **ccw_device_get_path_mask** (struct ccw_device * *cdev*);

Arguments

cdev   ccw device to be queried

Returns

0 if no subchannel for the device is available, else the mask of currently available paths for the ccw device's subchannel.

Name

ccw_device_get_chp_desc — return newly allocated channel-path descriptor

Synopsis

```
struct channel_path_desc * ccw_device_get_chp_desc (struct ccw_device
* cdev, int chp_idx);
```

Arguments

`cdev`   device to obtain the descriptor for

`chp_idx`   index of the channel path

Description

On success return a newly allocated copy of the channel-path description data associated with the given channel path. Return NULL on error.

Name

ccw_device_get_id — obtain a ccw device id

Synopsis

```
void ccw_device_get_id (struct ccw_device * cdev, struct ccw_dev_id *
dev_id);
```

Arguments

cdev   device to obtain the id for

dev_id   where to fill in the values

Name

ccw_device_tm_start_key — perform start function

Synopsis

```
int ccw_device_tm_start_key (struct ccw_device * cdev, struct tcw * tcw,
unsigned long intparm, u8 lpm, u8 key);
```

Arguments

cdev   ccw device on which to perform the start function

tcw   transport-command word to be started

intparm   user defined parameter to be passed to the interrupt handler

lpm   mask of paths to use

key   storage key to use for storage access

Description

Start the tcw on the given ccw device. Return zero on success, non-zero otherwise.

Name

ccw_device_tm_start_timeout_key — perform start function

Synopsis

```
int ccw_device_tm_start_timeout_key (struct ccw_device * cdev, struct
tcw * tcw, unsigned long intparm, u8 lpm, u8 key, int expires);
```

Arguments

cdev   ccw device on which to perform the start function

tcw   transport-command word to be started

intparm user defined parameter to be passed to the interrupt handler

lpm   mask of paths to use

key   storage key to use for storage access

expires time span in jiffies after which to abort request

Description

Start the tcw on the given ccw device. Return zero on success, non-zero otherwise.

Name

ccw_device_tm_start — perform start function

Synopsis

```
int ccw_device_tm_start (struct ccw_device * cdev, struct tcw * tcw,
unsigned long intparm, u8 lpm);
```

Arguments

cdev   ccw device on which to perform the start function

tcw   transport-command word to be started

intparm   user defined parameter to be passed to the interrupt handler

lpm   mask of paths to use

Description

Start the tcw on the given ccw device. Return zero on success, non-zero otherwise.

Name

ccw_device_tm_start_timeout — perform start function

Synopsis

```
int ccw_device_tm_start_timeout (struct ccw_device * cdev, struct tcw
* tcw, unsigned long intparm, u8 lpm, int expires);
```

Arguments

cdev   ccw device on which to perform the start function

tcw   transport-command word to be started

intparm   user defined parameter to be passed to the interrupt handler

lpm   mask of paths to use

expires   time span in jiffies after which to abort request

Description

Start the tcw on the given ccw device. Return zero on success, non-zero otherwise.

Name

ccw_device_get_mdc — accumulate max data count

Synopsis

```
int ccw_device_get_mdc (struct ccw_device * cdev, u8 mask);
```

Arguments

cdev   ccw device for which the max data count is accumulated

mask   mask of paths to use

Description

Return the number of 64K-bytes blocks all paths at least support for a transport command. Return values <= 0 indicate failures.

Name

ccw_device_tm_intrg — perform interrogate function

Synopsis

```
int ccw_device_tm_intrg (struct ccw_device * cdev);
```

Arguments

cdev   ccw device on which to perform the interrogate function

Description

Perform an interrogate function on the given ccw device. Return zero on success, non-zero otherwise.

Name

ccw_device_get_schid — obtain a subchannel id

Synopsis

```
void   ccw_device_get_schid  (struct   ccw_device  *  cdev,   struct
subchannel_id * schid);
```

Arguments

cdev   device to obtain the id for

schid   where to fill in the values

The channel-measurement facility

The channel-measurement facility provides a means to collect measurement data which is made available by the channel subsystem for each channel attached device.

Name

arch/s390/include/asm/cmb.h — Document generation inconsistency

Oops

Warning

The template for this document tried to insert the structured comment from the file `arch/s390/include/asm/cmb.h` at this point, but none was found. This dummy section is inserted to allow generation to continue.

Name

enable_cmf — switch on the channel measurement for a specific device

Synopsis

```
int enable_cmf (struct ccw_device * cdev);
```

Arguments

cdev   The ccw device to be enabled

Description

Returns 0 for success or a negative error value.

Context

non-atomic

Name

disable_cmf — switch off the channel measurement for a specific device

Synopsis

```
int disable_cmf (struct ccw_device * cdev);
```

Arguments

cdev   The ccw device to be disabled

Description

Returns 0 for success or a negative error value.

Context

non-atomic

Name

cmf_read — read one value from the current channel measurement block

Synopsis

u64 **cmf_read** (struct ccw_device * *cdev*, int *index*);

Arguments

cdev   the channel to be read

index   the index of the value to be read

Description

Returns the value read or 0 if the value cannot be read.

Context

any

Name

cmf_readall — read the current channel measurement block

Synopsis

```
int cmf_readall (struct ccw_device * cdev, struct cmbdata * data);
```

Arguments

cdev   the channel to be read

data   a pointer to a data block that will be filled

Description

Returns 0 on success, a negative error value otherwise.

Context

any

Chapter 3. The ccwgroup bus

The ccwgroup bus only contains artificial devices, created by the user. Many networking devices (e.g. qeth) are in fact composed of several ccw devices (like read, write and data channel for qeth). The ccwgroup bus provides a mechanism to create a meta-device which contains those ccw devices as slave devices and can be associated with the netdevice.

ccw group devices

Name

struct ccwgroup_device — ccw group device

Synopsis

```
struct ccwgroup_device {
  enum state;
  unsigned int count;
  struct device dev;
  struct work_struct ungroup_work;
  struct ccw_device * cdev[0];
};
```

Members

state online/offline state

count number of attached slave devices

dev embedded device structure

ungroup_work work to be done when a ccwgroup notifier has action type `BUS_NOTIFY_UNBIND_DRIVER`

cdev[0] variable number of slave devices, allocated as needed

Name

struct ccwgroup_driver — driver for ccw group devices

Synopsis

```
struct ccwgroup_driver {
  int (* setup) (struct ccwgroup_device *);
  void (* remove) (struct ccwgroup_device *);
  int (* set_online) (struct ccwgroup_device *);
  int (* set_offline) (struct ccwgroup_device *);
  void (* shutdown) (struct ccwgroup_device *);
  int (* prepare) (struct ccwgroup_device *);
  void (* complete) (struct ccwgroup_device *);
  int (* freeze) (struct ccwgroup_device *);
  int (* thaw) (struct ccwgroup_device *);
  int (* restore) (struct ccwgroup_device *);
  struct device_driver driver;
};
```

Members

setup   function called during device creation to setup the device

remove   function called on remove

set_online   function called when device is set online

set_offline   function called when device is set offline

shutdown   function called when device is shut down

prepare   prepare for pm state transition

complete   undo work done in *prepare*

freeze   callback for freezing during hibernation snapshotting

thaw   undo work done in *freeze*

restore   callback for restoring after hibernation

driver   embedded driver structure

Name

ccwgroup_set_online — enable a ccwgroup device

Synopsis

```
int ccwgroup_set_online (struct ccwgroup_device * gdev);
```

Arguments

gdev   target ccwgroup device

Description

This function attempts to put the ccwgroup device into the online state.

Returns

0 on success and a negative error value on failure.

Name

ccwgroup_set_offline — disable a ccwgroup device

Synopsis

```
int ccwgroup_set_offline (struct ccwgroup_device * gdev);
```

Arguments

gdev   target ccwgroup device

Description

This function attempts to put the ccwgroup device into the offline state.

Returns

0 on success and a negative error value on failure.

Name

ccwgroup_create_dev — create and register a ccw group device

Synopsis

```
int ccwgroup_create_dev (struct device * parent, struct ccwgroup_driver
* gdrv, int num_devices, const char * buf);
```

Arguments

parent	parent device for the new device
gdrv	driver for the new group device
num_devices	number of slave devices
buf	buffer containing comma separated bus ids of slave devices

Description

Create and register a new ccw group device as a child of *parent*. Slave devices are obtained from the list of bus ids given in *buf*.

Returns

0 on success and an error code on failure.

Context

non-atomic

Name

ccwgroup_driver_register — register a ccw group driver

Synopsis

```
int ccwgroup_driver_register (struct ccwgroup_driver * cdriver);
```

Arguments

cdriver   driver to be registered

Description

This function is mainly a wrapper around `driver_register`.

Name

ccwgroup_driver_unregister — deregister a ccw group driver

Synopsis

void **ccwgroup_driver_unregister** (struct ccwgroup_driver * *cdriver*);

Arguments

cdriver   driver to be deregistered

Description

This function is mainly a wrapper around `driver_unregister`.

Name

ccwgroup_probe_ccwdev — probe function for slave devices

Synopsis

```
int ccwgroup_probe_ccwdev (struct ccw_device * cdev);
```

Arguments

cdev   ccw device to be probed

Description

This is a dummy probe function for ccw devices that are slave devices in a ccw group device.

Returns

always 0

Name

ccwgroup_remove_ccwdev — remove function for slave devices

Synopsis

```
void ccwgroup_remove_ccwdev (struct ccw_device * cdev);
```

Arguments

cdev   ccw device to be removed

Description

This is a remove function for ccw devices that are slave devices in a ccw group device. It sets the ccw device offline and also deregisters the embedding ccw group device.

Chapter 4. Generic interfaces

Some interfaces are available to other drivers that do not necessarily have anything to do with the busses described above, but still are indirectly using basic infrastructure in the common I/O layer. One example is the support for adapter interrupts.

Name

register_adapter_interrupt — register adapter interrupt handler

Synopsis

```
int register_adapter_interrupt (struct airq_struct * airq);
```

Arguments

airq   pointer to adapter interrupt descriptor

Description

Returns 0 on success, or -EINVAL.

Name

unregister_adapter_interrupt — unregister adapter interrupt handler

Synopsis

```
void unregister_adapter_interrupt (struct airq_struct * airq);
```

Arguments

airq   pointer to adapter interrupt descriptor

Name

airq_iv_create — create an interrupt vector

Synopsis

```
struct airq_iv * airq_iv_create (unsigned long bits, unsigned long
flags);
```

Arguments

bits   number of bits in the interrupt vector

flags   allocation flags

Description

Returns a pointer to an interrupt vector structure

Name

airq_iv_release — release an interrupt vector

Synopsis

```
void airq_iv_release (struct airq_iv * iv);
```

Arguments

iv   pointer to interrupt vector structure

Name

airq_iv_alloc — allocate irq bits from an interrupt vector

Synopsis

unsigned long **airq_iv_alloc** (struct airq_iv * *iv*, unsigned long *num*);

Arguments

iv   pointer to an interrupt vector structure

num   number of consecutive irq bits to allocate

Description

Returns the bit number of the first irq in the allocated block of irqs, or -1UL if no bit is available or the AIRQ_IV_ALLOC flag has not been specified

Name

airq_iv_free — free irq bits of an interrupt vector

Synopsis

```
void airq_iv_free (struct airq_iv * iv, unsigned long bit, unsigned
long num);
```

Arguments

iv   pointer to interrupt vector structure

bit   number of the first irq bit to free

num   number of consecutive irq bits to free

Name

airq_iv_scan — scan interrupt vector for non-zero bits

Synopsis

unsigned long **airq_iv_scan** (struct airq_iv * *iv*, unsigned long *start*, unsigned long *end*);

Arguments

iv   pointer to interrupt vector structure

start   bit number to start the search

end   bit number to end the search

Description

Returns the bit number of the next non-zero interrupt bit, or -1UL if the scan completed without finding any more any non-zero bits.
